

Crunchies

Your business,
in one place.

A guide for

Archana Kothadiya

Crunchies by Archana · Pune

WHY THIS APP

Your work deserves a tool that respects your time.

You make beautiful snacks. You handle orders, customers, and the team. The thinking part — **what to make, who to call, what was paid** — can live in this app, not in your notebook.

Three small problems. This app solves all three.

1

Plan what to make

No more guessing. The app suggests quantities each week.

2

Remember every customer

Especially new ones from exhibitions. Nothing is lost.

3

Track every order

Every WhatsApp message becomes a clean record.

Five tabs at the bottom.

Every screen lives under one of these five.

Today What to do right now. Open here every morning.

Orders Every order, ever. Search, filter, log new ones.

Customers Every person who has bought from you.

Production What to make this week. Log each batch when done.

Reports Look back at the week, month, or longer.

★ The **gear icon** on the Today screen (top-right corner) opens your business settings — name, address, bill footer. Set it once.

TODAY

Open the app. See what to do.

The Today screen, showing this week's plan and pending orders.

Top half: "This week, make." Each row tells you how much to cook.

Bottom half: "Pending today." Who needs their order today.

A new order from WhatsApp.

Tap **+ Log new order** from anywhere. Fill in the steps.
The app saves it.

- 1** **Pick the customer.** Type 2 letters of their name. Or add a new one inline.
- 2** **Pick the items.** Tap the products. Type the quantity.
- 3** **Set the day they need it.** Today by default. Change if it's later in the week.
- 4** **Mark paid or unpaid.** Tap Save.

★ End of day with many messages? Open the Orders tab → tap *Batch*. Log all 5–10 orders one after another.

PRODUCTION

How much to make. Tracked.

The Production screen with this week's targets.

For each product, the app shows: **plan** (your target), **suggested** (what the app thinks), and **made** (what you've done so far).

First few weeks: the app uses the numbers you set during setup.

After a month of real orders: the app learns your real rhythm. No work from you.

MONDAY MORNING

Plan the week. Once.

Plan this week

Week of 2026-05-25

Besan Laddu
suggested 6 box

7

Chakli
suggested 4 pack

4

Chivda
suggested 3 kg

3

CUSTOMERS

PRODUCTION

REPORTS

The "Plan this week" screen — saved once each Monday.

Every Monday, open Production → **Plan this week**. Look at the suggestions. Change them if you know better. Tap Save.

By Sunday you'll see how close your plan came. That's how the app learns.

CUSTOMERS

Everyone you've sold to.

A customer's full history — orders, notes, contact.

Search by name or phone. Filter by channel (Personal, Reseller, Exhibition).

Tap a customer to see all their orders. **Send WhatsApp** opens a chat with them. **Tap the phone number** to copy it.

EVENTS

Festivals and exhibitions.

Add upcoming events (Diwali, Ganpati, mela stalls, etc). The app will **increase production suggestions** in the weeks before, so you're not caught short.

For exhibitions: the app gives you a special web link for that event. Print it. Share it on the stall. Customers fill the form themselves — their order and contact details come into your app automatically.

★ No more lost slips of paper after a busy weekend at a mela.

REPORTS

Look back. Learn the rhythm.

Reports — Week tab. Plan vs what got ordered.

Three views at the top: **Week**, **Month**, **Trends**.

The numbers tell you: did you make enough? Too much? Which products are growing? No pressure — just the truth, gently.

BILLS

Send a bill on WhatsApp in 5 seconds.

Open any order. Tap **Generate bill**. A neat PDF appears. Tap **Share**. Send it to the customer on WhatsApp.

The bill carries your name, address, signature, and (if you have one) your GSTIN. Set these once in **Settings**.

Paid bills show a small **PAID** stamp with the date you received the money. Unpaid bills show a polite "payment due on collection" line — never accusatory.

Three short visits per week.

Every morning · 3 minutes

Open Today.

- See pending orders.
- Log any new WhatsApp orders.
- Mark fulfilled and paid as you go.

Monday · 5 minutes

Plan the week.

- Production tab → Plan this week.
- Adjust the numbers if needed. Save.

Sunday evening · 5 minutes

Look at Reports.

- Reports → Week. How did it go?
- That's it.

A NOTE

This app is yours.

It will feel new. That's normal. The first week, just open Today every morning and try to log one order. By the second week, the small habits will start to feel natural.

When something feels slow, or a button is in the wrong place, or you need a feature it doesn't have — **tell me**. We'll keep adjusting it until it fits you.

With love,
Karan

The screenshots in this booklet use example customers and products, not your real records.
